To Whom it May Concern:

The Orange County Fire Chiefs have given their endorsement to proceed with the mission to solicit funding by Communications Support Corporation for the purpose of developing an interactive television network master plan for Orange County.

This master plan would connect all fire stations within Orange County as well as the public in any local area. The Laguna Beach Fire Department supports the development of this plan. This resource would be invaluable as a training tool and would allow firefighters to remain in their respective first due areas for training. It would, also, allow countywide sharing of F.E.M.A. and Emergency Education Network Training Broadcasts.

The development and initiation of this plan would also provide a valuable link to our public for emergency information broadcasts as well as public awareness and disaster preparedness broadcasts.
